nj2006@bu.edu | (617) 650-9906 | linkedin.com/in/neevj2006 | github.com/neevj2006/ | Boston, MA

EDUCATION

Boston University

Bachelor of Science, Computer Engineering

- GPA: 3.7 / 4.0; Dean's List;

Boston, MA

Expected Dec 2027

TECHNICAL SKILLS

Languages & Core CS: Python, C++, C, TypeScript, JavaScript, SQL, Kotlin, data structures, algorithm design

Machine Learning: PyTorch, XGBoost, TensorFlow, scikit-learn, graph neural networks, model calibration, model evaluation, NLP, hyperparameter tuning, feature engineering

LLMs & Retrieval: RAG, hybrid BM25/vector retrieval, retrieval evaluation, OpenAI API, Claude agents (n8n), Ollama

Frameworks & Data: FastAPI, Next.js, React, PostgreSQL, data pipelines, data preprocessing, pandas, NumPy, pgvector, SQLite, Redis

Cloud & Tools: AWS, CI/CD, Docker, Git, Jupyter Notebook, Jest, Supertest, Vosk

EXPERIENCE

Software Engineering Intern

May 2026 - Present

SportsExcitement

Boston, MA

- Built authenticated search, editable profiles, and the School Finder experience on a Next.js, React, TypeScript stack.
- Connected the mentorship directory to live data and built the mentor-profile API, migration, validation, and pagination.
- Added 43 tests across authentication, profiles, and mentorship APIs with Jest, React Testing Library, and Supertest.

AI & Machine Learning Intern

May 2025 - Apr 2026

SeamsFriendly

Delhi, India

- Automated inventory & order workflows with AI models and Python scripts, cutting turnaround time 30%+.
- Audited 71 Make scenarios, retired 8, and moved the rest to self-hosted n8n and Claude agents, freeing 60K ops/month.
- Built sf-admin, a Next.js 15 and PostgreSQL order system that replaced spreadsheets, with 4 integrations and 17 jobs.
- Migrated the customer platform from Shopify to a Next.js storefront with a full-stack CMS for site content.

PROJECTS

FraudGraph

- Built a temporal graph ML platform on the 590,540-transaction IEEE-CIS dataset with leakage-resistant time splits.
- Tuned and evaluated XGBoost + GNNs on analyst-budget recall, fraud-value capture, and robustness.
- XGBoost achieved 0.1262 holdout AP and 33% precision at top-100, outperforming GraphSAGE's 0.1093 AP.
- Built authenticated, owner-scoped APIs and an investigator UI that ranks alerts, records dispositions, and exports cases.

SpecGuard

- Built an evidence-grounded code-review platform that checks JS/TS pull requests against written requirements.
- Grounded OpenAI LLM verdicts (RAG) in cited lines via hybrid BM25 + vector retrieval.
- Covered retrieval, LLM output validation, authentication, and failure handling with 322 automated tests.
- Held 100% Recall@3 and lifted MRR from 0.625 to 1.0 on a reproducible 10-case retrieval benchmark.

F1 Race Forecasting System

- Built a leakage-resistant data pipeline over 81 races, preprocessing 1,640 driver-race records into 29 features.
- Predicted full-race finishing order plus win, podium, top-10 & DNF odds via 10,000 Monte Carlo scenarios per race.
- On five untouched 2026 races, reached 0.754 Spearman correlation, 2.84-position MAE, and 60% winner accuracy.
- Identified 41 of 50 actual top-10 finishers across five held-out races (82% recall).

Gideon, Voice Assistant

- Built a local-first Windows voice assistant + Android bridge with offline Vosk speech recognition.
- Ran deterministic command parsing with SQLite persistence and local, cloud, or automatic-fallback AI modes.
- Implemented on-device inference with a 1.5B-parameter quantized LLM, unloaded after a 30s keep-alive.
- Secured writes with single-use confirmations and HMAC-SHA256 auth.
