EDUCATION

Boston University Boston, MA
Bachelor of Science, Computer Engineering Expected Dec 2027

- Concentration: Machine Learning | GPA: 3.7/4.0 | Dean's List

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, SQL, C++, C, HTML/CSS
Web & APIs: React, Next.js, TanStack Query, Node.js, Express, NestJS, FastAPI, REST, WebSockets, Server-Sent Events
Databases: PostgreSQL/PostGIS, MySQL, Redis, Prisma, Drizzle ORM, Supabase
Testing & DevOps: Jest, React Testing Library, Supertest, Playwright, Docker, AWS, Git, CI/CD

EXPERIENCE

Software Engineering Intern May 2026 - Aug 2026
SportsExcitement Remote

- Built authenticated search, editable profiles, and a School Finder in Next.js for a pre-launch student-athlete platform.
- Implemented Express/Prisma mentorship APIs with database migrations, input validation, and pagination.
- Fixed login and OTP routing errors; added loading and error states across authenticated workflows.
- Added 43 Jest, React Testing Library, and Supertest tests covering authentication, profiles, and mentorship.

AI & Machine Learning Intern May 2025 - Apr 2026
SeamsFriendly Remote

- Built a Next.js/PostgreSQL order management system replacing Make and Google Sheets, cutting turnaround by 30%.
- Audited 71 Make scenarios and migrated the kept OMS workflows to n8n, eliminating 60K Make operations a month.
- Integrated 4 webhook sources and 17 background jobs for synchronization, alerts, and risk projections.
- Rebuilt the storefront and CMS from scratch, replacing Shopify while retaining payment processing.
- Built goal-driven Claude agents to implement features, run visual tests, and verify storefront and OMS changes.

PROJECTS

DevRelay | Next.js, React, NestJS, PostgreSQL, Redis/BullMQ | Source Code | Live Demo

- Built and deployed a multi-tenant platform with HTTP/TLS/DNS checks, incident handling, and public status pages.
- Added SSE updates, deduplicated email and signed-webhook alerts, and a transactional outbox.
- Enforced tenant-scoped RBAC, SSRF/DNS-rebinding defenses, and immutable audit trails.
- Load- and fault-tested the system with 6,000 monitoring results and 2,000 audit events.

TransitPulse | Next.js, TypeScript, FastAPI, PostgreSQL/PostGIS, Redis | Source Code

- Built a transit PWA and FastAPI backend with versioned GTFS imports and live-feed polling every 60 seconds.
- Measured a 74% Redis cache hit rate and implemented schedule fallback when live feeds became stale.
- Added delay percentiles, on-time performance analytics, and missed-transfer risk estimates.
- Achieved 1.0s First Contentful Paint and minimal layout shift (0.006 CLS) in Lighthouse testing.

SpecGuard | Python, FastAPI, Next.js, TypeScript, PostgreSQL, GitHub Apps | Source Code

- Built a FastAPI service, Next.js workspace, CLI, and GitHub App to review pull requests against written requirements.
- Combined AST-aware code chunks, BM25/vector retrieval, and LLM verdicts with validated source citations.
- Added editable review criteria so users could refine requirements before running evidence-based code analysis.
- Added persisted review history, reviewer notes, and JSON exports to support repeatable code-review workflows.

FraudGraph | Python, FastAPI, Next.js, PostgreSQL | Source Code

- Built a fraud investigator UI for a 590K-transaction IEEE-CIS benchmark; model precision reached 33% at top 100.
- Visualized shared-entity graphs to help analysts inspect connections and investigate suspicious transaction patterns.
- Implemented authenticated APIs with ownership controls to restrict access to analyst cases and investigation records.
- Added analyst dispositions and auditable case exports to document findings and preserve investigation outcomes.
